

Netherlands Organisation for Scientific Research  
Physical Sciences

# Scientist on the Job

- *An opportunity for scientists to gain a short-term (3-6 month) on-the-job experience in the private or public sector;*
- *An opportunity for organisations to get desired scientific input through short-term internships;*
- *Advantages: extends the chain of SBIR and long term research: a researcher may test research questions in a practical situation, an organisation may receive scientific answers and insights, both increase understanding of each others expertise, resulting in stronger partnerships between science and practice;*
- *New instrument by NWO Physical Sciences and TNO;*
- *Scientists and public/private partners of NWO and TNO's cybersecurity research programmes will be invited to post their interests, challenges, profiles and/or desired area of expertise on an online marketplace;*
- *NWO's intention is to apply this fellowship instrument in a broader context of national and international computer science.*
